IDAHO Annual Report

1977 ASCS Programs

UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

June, 1978

F O R E W O R D

This annual report is prepared by the Idaho State Office of the Agricultural Stabilization and Conservation Service to summarize the participation of Idaho farmers in federal farm programs during the past year.

It was prepared for the purpose of furnishing a source of information for ASCS personnel, committeemen, agricultural agencies, and others interested in Idaho agriculture.

The Idaho State ASC Committee sincerely appreciates the work of the persons involved in the preparation of the report.

Much credit is due to the dedicated service of County Executive Directors together with the program assistants throughout the State for the tireless effort put forth in the fulfillment of their duties. To them also, our sincere thanks.

IDAHO STATE ASC COMMITTEE

Ralph E. Coates
Charles W. Buttars
Alvin E. Ralstin

Dr. Auttis Mullins, Member Ex-Officio

STATE EXECUTIVE DIRECTOR

Harland K. Blackburn

ADMINISTRATIVE

Congress appropriates money each year for the operation of county offices.

It is the responsibility of the Administrative Section to allocate the funds to the counties. The amount allocated is based on the work measurement report, which is submitted annually by each county office.

The staffing of county offices is also based on workload. Periodic reviews are made to determine whether any changes should be made in county office personnel ceilings.

The Management Field Office in Kansas City summarizes expenses and personnel information fed into the computer from data furnished by the State and county offices on a bi-weekly basis.

Idaho has 42 county offices throughout the State. At the present time, there are 113 employees in the counties and 22 employees in the State office. These numbers include part-time help.

Each year county elections are held by mail to select farmers to serve on the county committees and are generally responsible for administering ASCS programs approved for the county.

1977 ACP

Cost-sharing was available under annual agreements (ANA), and long-term agreements (LTA). Long-term agreements authorize farmers and the Government to enter into from three to ten year agreements for carrying out conservation practices.

FORESTRY INCENTIVES PROGRAM

This program (FIP), a major departmental and congressional objective, was to intensify timber production efforts on non-industrial private forest lands. Seven counties (Benewah, Bonner, Boundary, Clearwater, Idaho, Kootenai and Latah) were designated FIP Counties and additional funds were allocated under this program. (A FIP payment was made by Lewis County in 1977 for completion of a practice approved when they were a designated county.)

EMERGENCY CONSERVATION MEASURES

Cost-sharing under ECM is only available for restoring land to its normal productive capacity on farms where the county committee determines, with concurrence of the State Committee, that Federal assistance is or will be required to return the land to productive agricultural use. The program was used in fourteen counties in 1977. Five counties (Bingham, Bonneville, Fremont, Jefferson and Madison) due to the Teton Dam Disaster. Eight counties (Adams, Blaine, Clark, Elmore, Gem, Owyhee, Twin Falls and Washington) due to drought. Two counties (Oneida and Owyhee) due to flash floods.

PROGRAM CONTRIBUTION

The rate at which the Government shares costs with farmers under these programs varies from 50 percent to 80 percent of the total cost. (The maximum under FIP was 75 percent.) Cost-share rates are established by county program development groups, within National and State policy, at the level deemed necessary to encourage desired program participation. The maximum payment under ACP, ANA, and LTA is $2,500 per person. There was no maximum limitation under FIP or ECM.

1977 WHEAT AND FEED GRAIN PROGRAM

The 1977 wheat and feed grain program is set up under a new system of price guarantee for American farmers. These new programs assure that farmers can expand production during the current period of strong world-wide demand for food without fear of a serious drop in farm income. They will continue to be able to "fine tune" their farming operations while reaching for maximum production and maximum income from the marketplace

The basic workings of the wheat and feed grain programs are built around the concept of target, or guaranteed, prices that come into effect only if the average cash market price drops below certain levels and results in deficiency payments. Since prices received by farmers were not in excess of the established target prices, there were deficiency payments made under the 1977 program.

Another important portion of the farm bill included in the 1977 wheat and feed grain programs is the provision under which a producer may qualify for disaster payments when prevented by a natural disaster from planting any portion of his wheat and feed grain allotment to wheat, feed grain or other nonconserving crops -- or when he is prevented from harvesting at least two-thirds of his normal production. For participating farmers, this eliminates much of the inherent risk of farming, enabling them to pull out all stops in increasing grain production without having to worry about recovering cash expenses in case of a natural disaster. A summary of participation in the disaster and feed grain programs and payments earned by Idaho farmers are shown in the following tabulations.

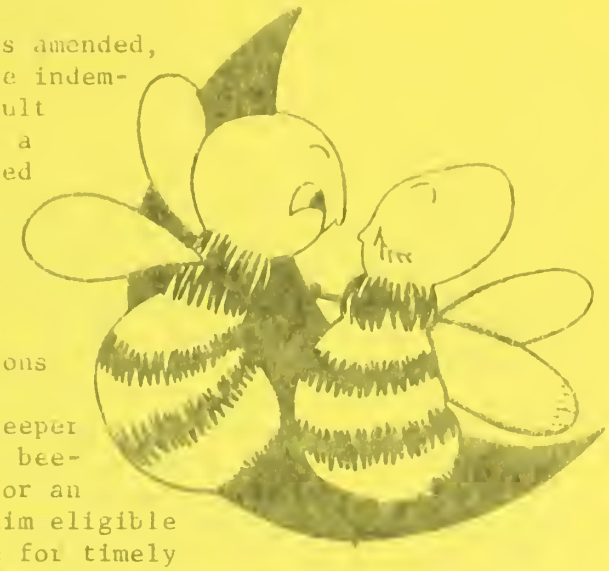
BEEKEEPER INDEMNITY PAYMENT PROGRAM



Section 804 of the Agricultural Act of 1970, as amended, authorizes the Secretary of Agriculture to make indemnity payments to beekeepers who, through no fault of their own, suffered losses of honey bees as a result of the use of economic poisons registered and approved for use by the Federal Government near or adjacent to the property on which the beekeeper's hives were located.

It is the responsibility of the apiarist to establish that he took all reasonable precautions to protect his bees, and that they did not die from starvation, disease or neglect. The beekeeper must file a report of the locations of all his beeyards at the time he makes his first request for an inspection of the damage to his bees to make him eligible for indemnity payment. He is also responsible for timely reporting and securing inspection of the losses.

For 1977 the rate of reimbursement per colony was: (a) colony destroyed - $22.50; (b) colony severely damaged - $15.00; (c) colony moderately damaged - $7.50; and (d) queen nucleus destroyed - $7.50. There were no claims filed for losses of queen nuclei destroyed in 1977.

EMERGENCY FEED PROGRAM

The Emergency Feed Program in effect in 1977 provided assistance to livestockmen in designated emergency areas through sales of CCC-owned feed grains at reduced prices to provide feed for eligible livestock. When all CCC-owned feed grains had been liquidated in November of 1977, another program had to be designed. The new EFP was still operated by ASCS, but all funds and procedures were approved through the Federal Disaster Assistance Administration. The program could be put into effect upon the recommendation of the County and State Emergency Boards if the Governor of the state certified there was a need for the program and the President agreed. After designation as an emergency area by the President, the county committees were responsible for determining eligibility and amount of assistance for individual livestockmen. Adams, Bear Lake, Blaine, Camas, Caribou, Elmore, Idaho, Lincoln, and Washington Counties were determined eligible under this program.

When the Food and Agriculture Act of 1977 was signed into law effective September 1, 1977, responsibility for the Emergency Feed Program shifted entirely to ASCS. Under this program, county committees can activate the EFP at any time for any producer who has suffered a substantial loss in the livestock feed normally produced on his farm for eligible livestock. The government can pay up to 50% of the cost of eligible feed, not to exceed two cents per pound of feed grain equivalent. As of December 31, 1977, there were 23 Idaho counties participating in the EFP.

The following chart contains information on both the ASCS and the FDAA Emergency Feed Programs.

TOTALS FOR THE STATE THROUGH 9-30-77*	409	111,150	90,707,645	28,152,462	$522,961.20

Nine counties were also approved for the FDAA Emergency Feed Program. They were Adams, Bear Lake, Blaine, Camas, Caribou, Elmore, Idaho, Lincoln and Washington. The total amount spent under this program has been included in the State totals shown above. The amount spent under the FDAA program was $109,979.22.

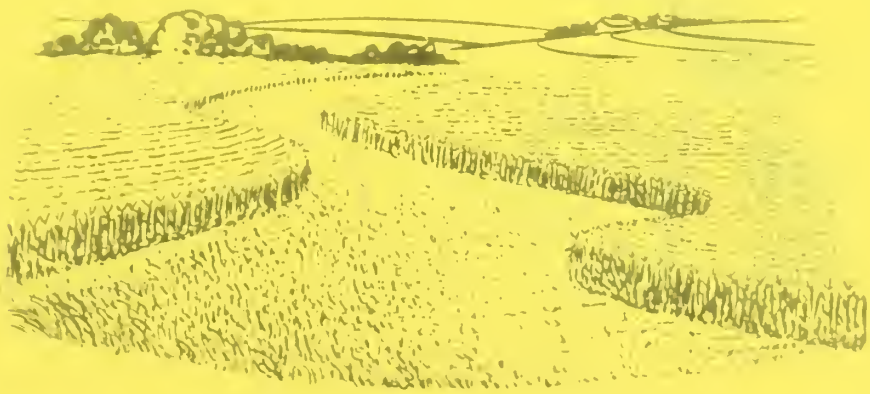
1976 PRICE SUPPORT AND COMMODITY LOAN PROGRAMS

Price support operations are conducted in the name of and financed by the Commodity Credit Corporation. Support is achieved through loans, purchases and payments for specified commodities at announced levels. For most commodities, loans are made directly to producers on the unprocessed commodity through ASCS county offices. Smaller quantities of some commodities are also purchased from producers.

Price support loans to producers are "nonrecourse". If the market prices rise above support prices or loan levels, producers can pay off their loans and market their commodity. If the market prices fail to rise above support levels, producers can deliver the commodity to CCC with appropriate adjustments for quality and quantity and discharge their obligations.

Support loans and purchases promote more orderly marketing. Producers holding loans can withhold their commodities from market in the fall and dispose of them throughout the year at more advantageous prices, thereby preventing markets from being "glutted" at certain times.

Crops placed under loan in Idaho in 1977 were barley, corn, honey, oats and wheat. The following tables indicate by commodity, the number, quantity and loan amount of farm stored and warehouse stored loans disbursed to producers under the Price Support Loan Program.



FARM STORAGE AND DRYING EQUIPMENT LOANS

The Farm Storage Facility Loan Program started in June, 1949. New loans made for storage facilities and drying equipment nationwide during the first six months of fiscal year 1978 amounted to about $355,824,992, as compared with $47,100,000 for the same period a year earlier. Loans outstanding under this program as of December 31, 1977, compared with December 31, 1976, amount to $491,756,072 and $143,500,000, respectively.

The program is administered by county ASC Committees. Loans are made directly to borrowers by CCC Sight Draft. A farmer may borrow up to 85 percent of the cost of a new grain storage bin. The loans mature in eight years and are payable in seven equal installments, with the first installment due 12 months after disbursement.

Presently the rate of interest is 7.00 percent per annum, and will remain at 7.00 percent until the loan matures.

Loans may be made only on new material and off-farm labor. Necessary drying equipment for drying eligible grain commodities, concrete bases, and on-site electrical equipment are also eligible for a loan.

The following tables show the activity in the 1977 Farm Storage and Facility Loan Program.

GRAIN RESERVE PROGRAM

The purpose of the farmer-owned Grain Reserve Program is to remove grain from the market and strengthen farmers' prices, while building a cushion against inflation, hunger, and future export embargoes.

Producers must have their grain under price support loan to be eligible for the Grain Reserve Program. Farmers agree to keep this grain in storage for three years, or until the "release level" is reached, at which point the grain can be released without penalty. Release levels are reached when prices rise to 140 percent of loan levels for wheat and 125 percent for feed grain. When prices reach the "call level" -- 175 percent for wheat and 140 percent for feed grains -- reserve loans will be called. Producers will then have 30 days to repay the loan or forfeit the commodity to CCC.

CCC makes advance storage payments of 25¢ per bushel (19¢ per bushel for oats) to the farmer for storing the grain for the three-year period. Interest, at six percent, is forgiven after the commodity has been in the GRP for one year.

The following tables show the number of bushels of wheat that has entered the GRP.

BINS AND DRYER DATA IS FOR 1977 CALENDAR YEAR.

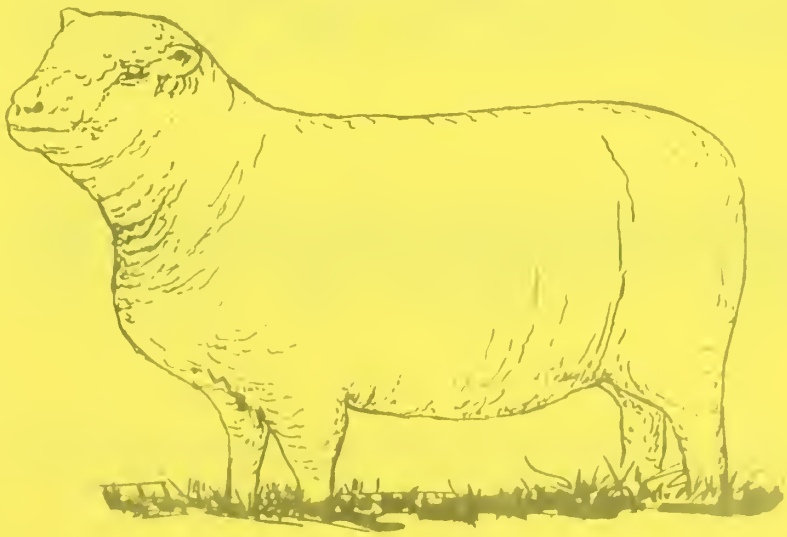
WOOL AND MOHAIR INCENTIVE PAYMENTS

The National Wool Act of 1954, as amended, provided a support program on wool and mohair. The intent of the program is to support these two commodities at the level determined necessary to encourage an annual domestic production as a measure of national security and to help the economic welfare. The support price for 1977 was set at 99 cents per pound, grease basis, for wool and $1.40 per pound for mohair. In April of each year payments are made to wool and mohair producers to bring the national average price paid for the previous year up to these support levels.

In 1977 the national average price received per pound of wool was 72.0 cents. The net sales receipts for each producer were increased by 37.5 percent to achieve the support price. The unshorn lamb payment rate was $1.08 per hundredweight -- the amount determined necessary to give the producer or feeder essentially the same return he would receive if he had shorn the animal and obtained the payment for shorn wool. As voted by wool producers in a 1974 referendum, a deduction of 1½ cents per pound of shorn wool and 7½ cents per hundredweight of unshorn lambs was taken for a wool promotion fund.

The average price received for mohair during 1977 was $2.87 per pound; therefore, no payment will be made to these producers.

The following table shows the amount paid to wool producers, by county.



SALES OF UNSHORN LAMBS, PAYMENTS, AND PROMOTION FUND DEDUCTIONS

NOTE: "Pounds of Wool Sold" includes sales of wool for which payment earned was equal to or less than the promotion fund deduction. Therefore, promotion fund deductions may differ from the amount obtained by applying the deduction rate of 1.5 cents a pound to the pounds of wool sold adjusted for wool on lambs purchased unshorn.

PAYMENTS FOR 1977 MARKETING YEAR ON WOOL AND LAMBS MARKETED JAN. 1 THRU DEC. 31, 1977
PAYMENT COMPUTATIONS COMPLETED THROUGH MARCH 31, 1978
